PROJECTS

Sudoku Game • October 2024

- **Implemented Game Logic:** Developed core Sudoku functionality including grid generation, validation, and solution algorithms, ensuring a playable and challenging puzzle experience.
- **Frontend Integration:** Structured the game's interface using HTML, CSS, and JavaScript, aligning the visual layout with user interactions for a seamless gaming experience.
- **Optimization & Bug Fixing:** Refactored and optimized code for performance, addressed gameplay bugs, and improved the overall user experience.

Memory Game • October 2024 - Present

- **Interactive Gameplay:** Developed a memory card game where players match pairs of cards by flipping them over, with smooth transitions and animations for enhanced user experience.
- **State Management and Logic:** Implemented the game logic to track card states (flipped, matched, or unmatched) and managed game rounds with reset functionality to allow players to start fresh after completing the game.
- **Responsive Design:** Created a visually appealing and responsive layout, ensuring the game functions properly across various screen sizes and devices for optimal playability.

Pig Dice • September 2024

- **Game Mechanics Development:** Built the Pig Dice game logic in JavaScript, implementing turn-based rules, dice rolls, and win conditions.
- **Interactive User Interface:** Designed a responsive UI for gameplay using HTML and CSS, allowing users to interact easily with the dice rolls and score display.
- **Refactoring & Code Structure:** Refactored the code to follow a modular structure, improving readability and maintainability.

Bank Account • August 2024

- **Account Operations Implementation:** Developed functions to manage deposits, withdrawals, and balance inquiries, simulating real-life bank account operations.
- **Transaction Logging:** Integrated a history feature to track user transactions, ensuring transparency and accountability within the system.
- **Error Handling & Validation:** Added input validation and error handling to ensure proper data entry, preventing invalid operations.

Family Tree • July 2022

- **Family Structure Visualization:** Developed a dynamic system to visualize and manage family relationships, allowing users to add, view, and trace family members.
- **Data Storage Integration:** Used a structured data model to represent family members and their relationships, ensuring accurate lineage representation.
- **User Interface Design:** Designed an accessible and clear interface where users can explore their family tree with ease.
